# *What energy source saves money and keeps us moving forward?*

***It's natural gas, of course.***

American-made natural gas is the energy of our lives. Let's learn more about how households, communities, and economy are benefiting from natural gas.

## ***Natural gas saves you money.***

Families that use natural gas save an average of nearly \$900 annually on their household budgets. That's about \$75 every month. Thanks to natural gas, Americans pay some of the lowest energy costs in the world. More money in your pocket makes a difference.

## ***Natural gas powers our communities and economy.***

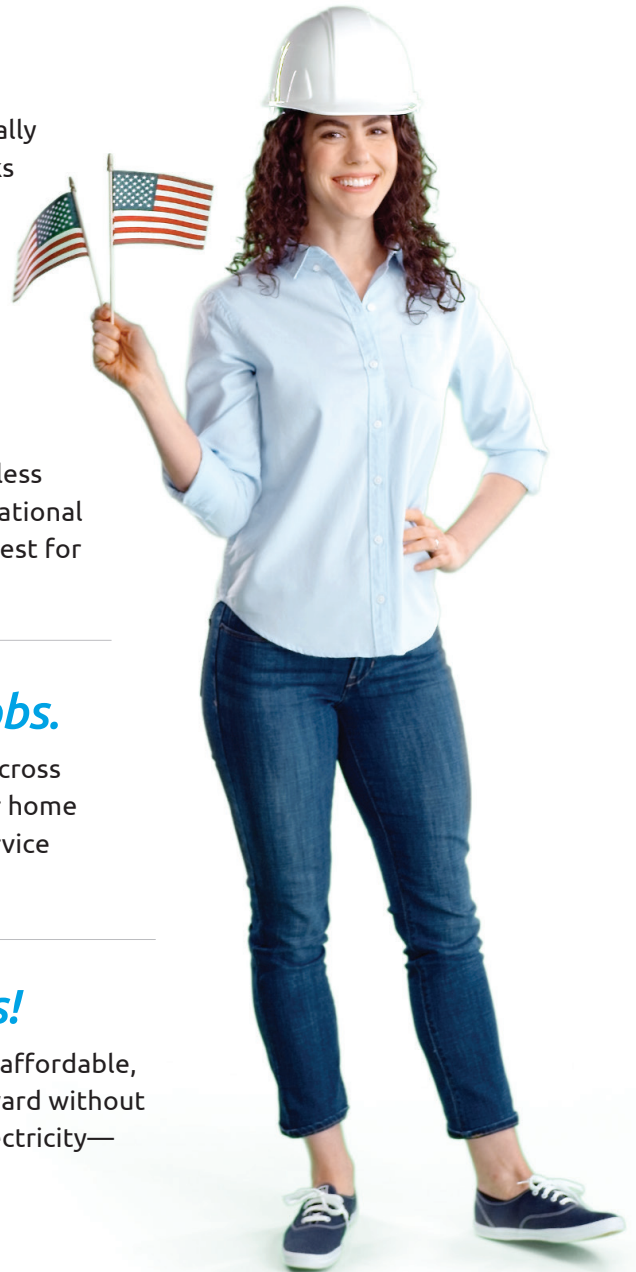

It's not just households that are saving money. When schools pay less for energy, they have more dollars to hire teachers and fund educational programs. When businesses save money on energy, they can reinvest for growth, create jobs, and compete worldwide.

## ***Natural gas provides nearly 2 million jobs.***

American natural gas supports American jobs in communities all across the country. The people who help bring affordable energy to your home and place of work include not only skilled technicians, but also service representatives, engineers, planners, accountants, and lots more.

## ***We're moving forward with natural gas!***

Natural gas is America's best source of energy. It's clean, reliable, affordable, and puts America in motion every day. We can't keep moving forward without energy, including our nation's number one source for heat and electricity—natural gas.
